## **Overload capability**

Low Overload (LO)

110% base load current IL for 60 s in a 300 s cycle time

High Overload (HO)

150% x base load current IH for 60 s within a 600 s cycle time

| Comparison with the reference converter (90% / 100%) | 48.3 %   |
|  |  |

The percentage values show the losses in relation to the rated apparent power of the converter.

The diagram shows the losses for the points (as per standard IEC61800-9-2) of the relative torque generating current (I) over the relative motor stator frequency(f). The values are valid for the basic version of the converter without options/components.

\*converted values

| Standards                 |   |  |
|---------------------------|---|--|
| Compliance with standards | UL, cUL, CE, C-Tick (RCM), EAC, KCC,<br>SEMI F47, REACH         |  |
| CE marking                | EMC Directive 2004/108/EC, Low-<br>Voltage Directive 2006/95/EC |  |

Communication

PROFINET, EtherNet/IF

 $<sup>\</sup>ensuremath{^{1)}}$  The output current and HP ratings are valid for the voltage range 440V-480V

<sup>3)</sup> Typical value. More information can be found in the element group "Converter losses to IEC 61800-9-2" in this datasheet.
